

Data Snapshot of the Sexual and Reproductive Health Needs of Youth in Foster Care in Los Angeles County

DEMOGRAPHICS

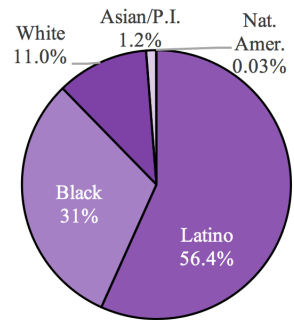

As of October 1, 2017, there were **35,659 youth in Los Angeles County's foster care system**.¹

Nearly one-fifth (18.9%) of foster youth in Los Angeles County are between the ages of eleven and fifteen, and about **22% are sixteen or older**.² Over half of Los Angeles's foster youth are Latino (56.3%). Most of the remaining youth are white (11%) or black (30.8%).³

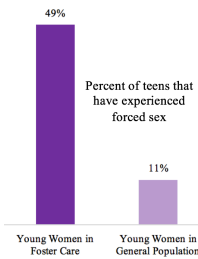

Nearly one-fifth (18%) of foster youth in Los Angeles County indicated that they were attracted to people of the same sex.⁴

About three-fifths (57%) of nineteen-year-olds in foster care in Los Angeles have lived in a group home. Of those, **60% have been placed in two or more group homes**.⁵

EXPERIENCE OF SEXUAL ASSAULT

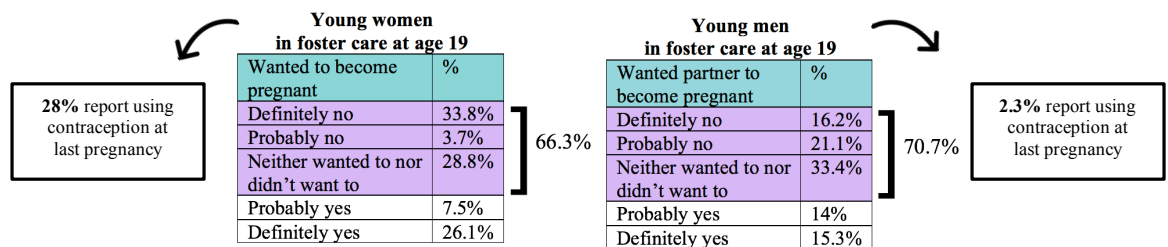

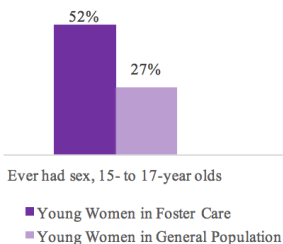

Female teens who have been in foster care are **more than four times as likely to have ever experienced forced sex** than those who have never been in foster care.⁶ In Los Angeles, among youth who had experienced sex by age 19, about 25% reported first having sexual intercourse when they were 13 years old or younger.⁷

More than 30% of female foster youth in Los Angeles were raped before they entered care, and about 45% were sexually molested. Youth also experience sexual abuse while in foster care. In Los Angeles, 10% of young adults were raped and **20% of young people were sexually molested while in foster care**.⁸

SEXUAL ACTIVITY AND CONTRACEPTION USE

Nationally, young women in the foster care system are **almost twice as likely to have engaged in sexual activity** as their same-aged peers in the general population.⁹ By age 19, over four-fifths of foster youth in Los Angeles reported ever having sexual intercourse.

About **two-thirds of California foster and former foster youth interviewed about their most recent pregnancy did not describe the pregnancy as wanted**, and yet less than a third of youth were using contraception at the time of conception.¹⁰ Among sexually active 19-year-old foster youth in Los Angeles, over **one-third report not using any form of birth control during sex**.¹¹

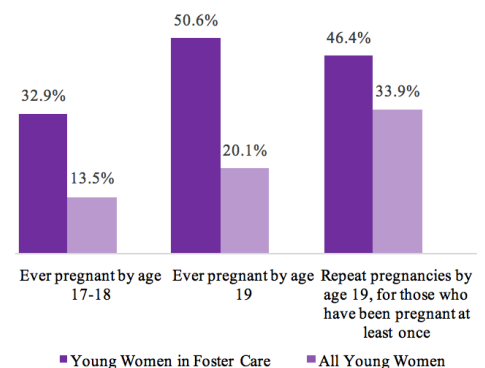

UNPLANNED PREGNANCY AND CHILDBIRTH

Young women in foster care and those who have "aged out" of foster care are **more than twice as likely to have experienced teen pregnancy** than their peers not in care.¹² Foster youth are also more likely to become pregnant more than once.¹³ By age 19, **nearly 60% of female foster youth in Los Angeles reported ever being pregnant**.¹⁴

Of California foster youth who were pregnant by age 17, **over 20% did not receive any prenatal care**.¹⁵ Over 40% of California foster youth teen pregnancies ended in a stillbirth or miscarriage.¹⁶ Nationally, only 14.3% of teen pregnancies end in a stillbirth or miscarriage.¹⁷

By age 21, **more than a third of young women who grew up in foster care are mothers in California**.¹⁸
